Bremerton Gasworks Superfund Site Scoping Memorandum Available

We want to let you know that the Scoping Memorandum for the Bremerton Gasworks Superfund site has been finalized, and is available on our webpage. This document summarizes what we know about the site so far, and is being used to help define the types of studies we will perform to evaluate contamination at the site, identify cleanup options, and design a cleanup plan. The final Scoping Memorandum reflects input we received from the public as well as comments we received from key stakeholders on the draft Memorandum.

View the Scoping Memorandum in the “Key Documents” section of our website: <http://go.usa.gov/5Fz5>

Request a paper copy of the Scoping Memorandum by contacting Bill Ryan, ryan.william@epa.gov or (206) 553-8561, or Debra Sherbina, sherbina.debra@epa.gov or (206) 553-0247.

Using the information in the Scoping Memorandum, Cascade Natural Gas Corporation and its consultants, with EPA’s oversight, are currently working on a draft work plan we call the “Remedial Investigation/Feasibility Study (RI/FS) Work Plan.” It will define the locations and types of sampling that will take place, including sampling procedures, so that we can determine the types, amounts, and locations of contamination at the site. It will also outline the approaches we will use to determine risks to people and the environment, and how we will identify and evaluate options for cleaning up the site. This spring, we expect to make the draft Work Plan available to key stakeholders for a technical review. Based on their input, we hope to finalize the RI/FS Work Plan and begin investigation work this summer.

We appreciate your interest in our work on the site.
